

**AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A method of filtering one or more events associated with one or more computer environments for display in a performance monitoring system, wherein each of the one or more events is generated when a threshold associated with a first parameter is met, the method comprising the steps of:

receiving a filter representing ~~at least one of:~~ a set of the one or more computer environments ~~or at least one second parameter;~~

in response to the receiving step, filtering the one or more events using the filter;

displaying the filtered one or more events; and

displaying a link from a first set of information related to the filtered one or more events being displayed, said link for accessing a second set of information related to the first set of information; wherein

the filter is received from, and the one or more filtered events are displayed on, a single display window.

Claims 2-3 (Cancelled)

4. (Previously Presented) A method as claimed in claim 1, wherein for each of the filtered one or more events, the displaying step further comprises the step of displaying a first set of information associated with:

an event identifier;

the associated one or more computer environments;

the first parameter;  
the second parameter; and  
a second parameter identifier.

Claim 5 (Cancelled)

6. (Currently Amended) A method as claimed in claim [[5]] 1, wherein the second set of information comprises information associated with the configuration of the one or more computer environments.

7. (Currently Amended) A method as claimed in claim [[5]] 1, wherein the second set of information comprises information associated with the threshold.

8. (Original) A method as claimed in claim 1, wherein the first parameter represents a severity level.

9. (Currently Amended) A method as claimed in claim 1, further comprising the steps of:

receiving a second filter representing at least one second parameter,  
filtering the one or more events using the second filter in response to the receiving the second filter step, wherein

the second parameter represents a resource.

10. (Currently Amended) A method as claimed in claim 1, further comprising the steps of:

receiving a second filter representing at least one second parameter,

filtering the one or more events using the second filter in response to the receiving the second filter step,

wherein the second parameter represents a time.

11. (Original) A method as claimed in claim 1, wherein each of the one or more computer environments comprises at least one computer system.

12. (Currently Amended) An apparatus for filtering one or more events associated with one or more computer environments for display in a performance monitoring system, wherein each of the one or more events is generated when a threshold associated with a first parameter is met, the apparatus comprising:

means for receiving a filter representing ~~at least one of:~~ a set of the one or more computer environments ~~or at least one second parameter;~~

means, responsive to the receiving means, for filtering the one or more events using the filter;

means for displaying the filtered one or more events; and

means for displaying a link from a first set of information related to the filtered one or more events being displayed, said link for accessing a second set of information related to the first set of information; wherein

Application No.: 10/667,581

the filter is received from, and the one or more filtered events are displayed on, a single display window.

Claim 13 (Cancelled)
